

**Amendments to the Specification:**

Please replace the portion of the specification at page 9, lines 17-21, shown below:

"Then, after setting a new polishing body to the second polishing body-holding unit, the apparatus performs the above-described sequential operations again. Switching from one polishing body to another can be achieved by rotating the first polishing body-holding unit to a position where the second polishing body-holding unit can pick the desired type of polishing body."

with the following amended portion:

~~"Then, after setting a new polishing body to the second polishing body-holding unit, the apparatus performs the above-described sequential operations again. Switching from one polishing body to another can be achieved by rotating the first polishing body-holding unit to a position where the second polishing body-holding unit can pick faces to the desired type of polishing body. Then, after setting a new polishing body to the second polishing body-holding unit, the apparatus performs the above-described sequential operations. After the operation is sequentially performed as for each desired polishing body, the work operation is terminated."~~
